catena

Turning chaos into control

What is Catena?

Catena is a next-generation OSS/BSS platform built specifically for ISPs.

It's the single system that unites your entire business from provisioning and billing to customer experience and reporting.

Built 100% in-house, Catena is fast to deploy, easy to scale, and designed to take the complexity out of running an ISP.

The problem vs. the solution

Running an ISP is complicated. Multiple suppliers, manual processes and disconnected systems means everything takes longer, costs more, and frustrates customers. The result? Missed opportunities and lost revenue.

The Catena solution

- One platform, total control
- Automated processes allowing your business to scale
- Seamless standard supplier integrations
- Customer-first experience
- **Result:** Efficiency, growth and happy customers

Why Catena?

Key benefits of Catena

- End-to-end control: provisioning, billing, CRM, insights
- 100% in-house platform
- No third-party lock-in
- Scales as you grow
- Fast to deploy - weeks, not years

What you get

With Catena, you don't just get software, you get control, speed, and simplicity, through:

Frictionless provisioning - Activate broadband and VoIP in minutes, not days.

Smart IP management - Allocate static or dynamic IPs instantly, with zero hassle.

Effortless billing - Automated, accurate, and reliable - no finance team required.

Total visibility - Track every order, every asset, every supplier in one place.

Delighted customers - Self-care portals give customers real-time updates and control at their fingertips.

Peace of mind - Our managed service keeps everything secure, updated, and running smoothly.

Ready to take control?

Stop wrestling with Chaos – Catena puts you back in charge.
